Atinary Technologies is a Swiss-American deeptech startup that offers software platform (SDLabs) and machine learning (ML) algorithms to accelerate R&D and innovation in pharma, biotech and materials science.

In this talk, Atinary Co-founder Dr. Roch (CTO), will describe how Atinary's SDLabs accelerates and improves R&D by deploying ML and in the R&D process. Lab scientists and operators can connect to SDLabs in the cloud and integrate with lab equipment and off-the-shelf robotic platforms to enable the Self-Driving Labs™. Thus, companies can deploy ML solutions seamlessly today, with no coding or ML expertise needed, starting with simulations or directly in the labs.
